

Introduction

Smart Investment Tracking Dashboard

1. Introduction

Portfolio Tracking Application ek **web-based system** hai jo users ko unke **stock market investments ko track, analyze aur manage** karne me help karta hai.

Aaj kal bahut se investors different companies ke stocks me invest karte hain. Is wajah se unhe ye samajhna mushkil ho jata hai ki:

- unka total investment kitna hai
- unhe kitna profit ya loss ho raha hai
- kaun se sector me zyada investment hai

Is problem ko solve karne ke liye ye application ek **centralized platform** provide karega jaha user apne sare stock transactions ko record kar sakta hai aur dashboard me unka analysis dekh sakta hai.

Problem Statement

2. Problem Statement

Stock market investors ko aksar kuch common problems face karni padti hain:

- different platforms par investment hone ki wajah se tracking difficult ho jati hai
- daily profit aur loss manually calculate karna padta hai
- portfolio performance ko visualize karna mushkil hota hai
- investment diversification ka proper analysis nahi ho pata

Isliye ek aise system ki zarurat hai jo **investment tracking ko simple aur automated banaye.**

Objective of the Project

3. Objective of the Project

Is project ka main objective ek aisi application banana hai jo users ko ye facilities provide kare:

- stock investments ka proper record maintain karna
- daily transactions track karna
- portfolio performance analyze karna
- profit aur loss automatically calculate karna
- investment data ko charts aur graphs me display karna

Proposed Solution

4. Proposed Solution

Is project me ek **Portfolio Tracking Web Application** develop ki jayegi jaha user:

- apna account create karega
- apne stock transactions add karega
- investment details store karega
- dashboard ke through portfolio performance dekh sakega

System automatically **profit, loss aur portfolio growth calculate karega.**

Technology Stack

5. Technology Stack

Is project ko develop karne ke liye following technologies use hongi:

Frontend

- HTML
- CSS
- JavaScript
- React

Frontend user interface design karne ke liye use hoga.

Backend

- Node.js
- Express.js

Backend server user requests handle karega aur database se data manage karega.

Database

- MongoDB

Isme user aur transaction data store hoga.

Visualization Library

Charts aur analytics dashboard banane ke liye:

- Chart.js

System Features

6. System Features

6.1 User Authentication

Application me user account system hoga jisme user:

- register karega
 - login karega
 - apna personal portfolio access karega
-

6.2 Transaction Management

User apne stock transactions add kar sakta hai.

Transaction me following details honggi:

- Company Name
- Stock Symbol
- Industry Sector
- Quantity of Shares
- Buy Price

- Current Price
- Transaction Date

Ye data database me store hoga.

6.3 Portfolio Dashboard

Dashboard application ka main section hoga.

Dashboard me user ko ye information milegi:

- Total Investment
 - Current Portfolio Value
 - Total Profit / Loss
 - Best Performing Stocks
 - Worst Performing Stocks
-

6.4 Data Visualization

Application me charts aur graphs ke through data visualization hoga.

Possible charts:

- Weekly Profit and Loss Chart
- Monthly Portfolio Growth Chart
- Sector-wise Investment Distribution

Isse user easily investment trends samajh sakta hai.

Database Design

7. Database Design

System me mainly 3 collections hong.

1. User Collection

Fields:

- userId
 - name
 - email
 - password
 - createdAt
-

2. Portfolio Collection

Fields:

- portfolioId
- userId
- totalInvestment

- portfolioValue
- profitLoss

3. Transaction Collection

Fields:

- transactionId
- userId
- companyName
- stockSymbol
- sector
- quantity
- buyPrice
- currentPrice
- transactionDate

Profit and Loss Calculation

8. Profit and Loss Calculation

Portfolio performance calculate karne ke liye following formulas use honge.

Investment Value

$\text{quantity} \times \text{buy price}$

Current Value

$\text{quantity} \times \text{current price}$

Profit / Loss

$\text{current value} - \text{investment value}$

User Workflow

9. User Workflow

Application ka working process kuch is tarah hoga:

1. User application me register karega
2. User login karega
3. User stock transaction add karega
4. Data database me save hoga
5. Dashboard data fetch karega
6. Charts aur analytics portfolio performance show karenge

Future Enhancements

10. Future Enhancements

Future version me application me following features add kiye ja sakte hain:

- real-time stock price integration
- AI based investment insights
- portfolio risk analysis
- price alert notifications
- mobile application version

Advantages of the System

11. Advantages of the System

- investment tracking easy ho jata hai
- portfolio performance clearly dikhai deta hai
- manual calculations ki zarurat nahi hoti
- users better financial decisions le sakte hain

AI Integration in Portfolio Tracking Application

AI Integration in Portfolio Tracking Application

1. Introduction to AI Module

Is project me **Artificial Intelligence module** integrate kiya jayega jo user ke investment data ko analyze karega aur uske basis par **profit, loss aur portfolio performance ka analysis** provide karega.

AI system ka main goal hai:

- portfolio performance analyze karna
 - investment trends samajhna
 - future suggestions dena
 - risk identify karna
-

2. How AI Will Work

AI module user ke **transaction data aur portfolio performance** ko analyze karega.

System following data use karega:

- investment history
- stock performance
- sector distribution
- profit and loss trends

AI algorithm in sab data ko analyze karke **smart suggestions generate karega.**

3. AI Features

1. Profit and Loss Analysis

AI automatically analyze karega:

- kaun se stocks profit me hain
- kaun se stocks loss me hain
- portfolio ka overall performance kya hai

Example output:

Your portfolio is currently in 12% profit.

Technology sector is performing best in your investments.

2. Investment Suggestions

AI user ko future investment ke liye suggestions dega.

Example:

Your portfolio has high investment in energy sector.

Consider diversifying into finance or technology sector.

3. Risk Analysis

AI portfolio risk calculate karega.

Example:

Your portfolio is highly dependent on a single sector.

This may increase investment risk.

4. Performance Insights

AI weekly aur monthly trends analyze karega.

Example:

Your portfolio growth has increased by 8% in the last month.

4. AI Technology

AI integration ke liye following technologies use ho sakti hain:

Option 1 (Simple AI)

- JavaScript logic
- data analysis algorithms

Isme simple **rule-based insights** generate honge.

Option 2 (Advanced AI)

- Python
- Machine Learning models
- Data prediction algorithms

Isme system **future trends predict** kar sakta hai.

5. AI Workflow

System ka workflow kuch is tarah hoga:

1. User transactions add karega
2. Data database me store hoga
3. AI module data fetch karega

4. Portfolio performance analyze karega
 5. AI suggestions generate karega
 6. Dashboard par insights display honge
-

6. Example AI Dashboard Output

AI dashboard par user ko kuch is type ke insights milenge:

- Portfolio profit: 15%
 - Highest performing sector: Technology
 - Risk level: Medium
 - Suggested action: Diversify portfolio
-

7. Benefits of AI Integration

AI integration ke fayde:

- automated investment analysis
- better decision making

- risk identification
- smart portfolio suggestions

Conclusion

12. Conclusion

Portfolio Tracking Application ek useful investment management tool hai jo users ko unke stock investments ko track aur analyze karne me help karta hai.

Is system ke through users apne portfolio ki performance easily monitor kar sakte hain aur future investments ke liye better decisions le sakte hain.

Flowchart
